REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The Applicant claims an energy device comprising a winding body in which a band-shaped laminate having a flexible elongated substrate, negative collector, negative active material, solid electrolyte, positive active material, and positive collector in this order is wound in a plate shape with flexible elongated substrate placed inside, wherein cross-sectional shape of winding body perpendicular to winding axis includes portions at opposing ends of cross-sectional shape with small radiuses of curvature and portions between opposing ends of cross-sectional shape with large radiuses of curvature, wherein substrate is made of insulating material; wherein band-shaped laminate, adjacent layers of substrate, negative collector, negative active material, electrolyte, positive active material and positive collector respectively are in direct contact with each other, and wherein negative collector, negative active material, electrolyte, positive active material, and positive collector are formed on the flexible elongated substrate by vacuum film-forming apparatus.

In the prior art of record, Carlson, US 7.081,142 B1, teach an energy device comprising a winding body having two intermediate laminates and a first and second protective layer.

However, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a band-shaped laminate having a flexible elongated substrate, negative collector, negative active material, solid electrolyte, positive active

material, and positive collector in this order is wound in a plate shape with flexible elongated substrate placed inside, wherein cross-sectional shape of winding body perpendicular to winding axis includes portions at opposing ends of cross-sectional shape with small radiuses of curvature and portions between opposing ends of cross-sectional shape with large radiuses of curvature, wherein substrate is made of insulating material; wherein band-shaped laminate, adjacent layers of substrate, negative collector, negative active material, electrolyte, positive active material and positive collector respectively are in direct contact with each other, and wherein negative collector, negative active material, electrolyte, positive active material, and positive collector are formed on the flexible elongated substrate by vacuum film-forming apparatus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
